## Life expectancy

Information about life expectancy (average length of life) and patterns of mortality (death) and survival at various ages.

Use the links below to find the statistics you need.

### Information releases

Explore our latest life expectancy statistics.

#### New Zealand Period Life Tables

These complete period life tables indicate life expectancy and the mortality and survival experience at each single year of age for the total New Zealand, Māori, non-Māori, and Pacific male and female populations. They are typically derived every five years for a three-year period centred on a census year.

#### Subnational Period Life Tables

These subnational period life tables indicate life expectancy and the mortality and survival experience at selected ages for male and female populations in different areas of New Zealand (eg regions, territorial authorities). They are typically derived every five years for a three-year period centred on a census year.

#### New Zealand Cohort Life Tables

These complete cohort life tables indicate life expectancy and the mortality and survival experience at each single year of age for the total New Zealand male and female populations born in each year from 1876. They are updated and extended annually.

#### New Zealand Abridged Period Life Table

Abridged period life tables indicate life expectancy and the mortality and survival experience at selected ages for the total New Zealand male and female populations. They are derived annually and give an indication of trends until the complete period life tables are available.

#### Births and Deaths

Information on the number of births and deaths registered in New Zealand, and selected fertility and mortality rates.

Facebook

A screenshot of a Facebook home page. At the top, there are fields for 'Email or Phone' and 'Password' with a 'Log In' button. Below that is a 'Forgotten account?' link. The main header says 'facebook'. On the left, there's a sidebar for 'Statistics NZ' (@StatisticsNZ) with links for 'Home', 'About', 'Photos', 'Videos', 'Likes', and 'Posts'. A green 'Create a Page' button is at the bottom. The main content area shows two large, overlapping scatter plots of orange and black dots. Below them is a post from 'Stats' dated 26 October at 20:48. The post text reads: "'Our marine environment 2016 is the independent overview we need to make well-informed decisions about how we manage our coasts & oceans & the pressures that impact on them' – Liz MacPherson, Statistics New Zealand Government Statistician discusses the importance of the Our marine environment 2016 report at the media conference earlier today. View the report here: <http://ow.ly/j3TB305zLwC>'. There are also sections for 'GOVERNMENT ORGANISATION', 'PEOPLE', 'ABOUT', and 'PHOTOS'.

A second screenshot of the same Facebook home page. The main difference is a large, solid yellow circle is overlaid on the top half of the page, covering the scatter plots and the top portion of the post. The rest of the interface, including the sidebar, post content, and footer, remains identical to the first screenshot.

## Construction leads GDP growth in March quarter

Embargoed until 10:45am – 16 June 2016

Gross domestic product (GDP) increased 0.7 percent in the March 2016 quarter, following an increase of 0.9 percent in the December 2015 quarter, Statistics New Zealand said today. The latest growth was driven by the construction and health industries, but partly offset by decreases in the primary industries and manufacturing.

“The main driver behind the GDP growth was construction, which rose 4.9 percent. This was the strongest quarterly growth for the industry since March 2014,” national accounts senior manager Gary Dunnet said.

The increase in construction also reflected higher construction-related investment. Investment in other construction (infrastructure such as roading and telecommunications) was up 12 percent – the highest quarterly growth since June 2014. Investment in residential building rose 4.2 percent, driven by strong increases in Auckland and Waikato, but eased in Canterbury.

Rising demand saw service industries grow 0.8 percent this quarter. The health and retail trade industries led the overall increase.

“We saw a larger population reflected in the rise in health care and consumer spending. When the rising population is taken into account, our GDP per capita rose 0.1 percent on the previous quarter,” Mr Dunnet said. Strong tourist arrivals also supported the growth in service industries, reflecting a 4.9 percent rise in tourist spending.

Annual GDP growth for the year ended March 2016 edged down to 2.4 percent while the size of the economy in current prices was \$249 billion.

**Ends**
